

Anaphylaxis

It is the responsibility of the parent/guardian to:

- Inform the school principal when their child is diagnosed as being at risk for anaphylaxis
- At the time of annual registration, complete medical forms and the ***Student Emergency Procedure Plan*** which includes a description of the child's allergy, emergency procedures, contact information, and consent to administer medication. This form should be completed in consultation with the child's physician
- Provide the school with updated medical information whenever there is a significant change related to their child
- Inform service providers of programs delivered on school property by non-school personnel of their child's anaphylaxis and care plan, as these programs are not the responsibility of the school.
